

OWM Experience a 68% Increase in Managed Assets

Throughout the course of the year, OWM has increased the number of platforms, drilling rigs and marine support vessels managed, by over 65%. This is a testimony to the focus, service and effort we offer all our clients. By concentrating exclusively on drinking water within the offshore environment OWM's CCS division, can tailor their offerings to the specific needs of our customers. We look forward to continuing to grow our fleet of managed assets in the new year ahead.

Fuel and Lube Analysis

It is standard best practice that any fuel supplied offshore, or for general asset use, is tested and analysed regularly to ensure it is fit for purpose. This can fall under various regulations and standards, from MGO standard 8217 to ISO-F-DMX regulations.

OWM provides a complete fuel and lube oil sampling and analysis service ensuring compliance with all current regulatory requirements. OWMs carry out all necessary sampling globally, 24/7.

Annual BA Valve Testing

Drinking water systems have to comply with the Water Supply (Water Fittings) Regulations 1999. This includes the prevention of Backflow and Back siphonage, The BA valves fitted must undergo annual inspections and regular maintenance to ensure the valves are working correctly.

OWM can supply, install and commission any valve by our fully qualified WRAS Approved Technicians, to ensure compliance with the mandatory requirements and regulations.
