

## ROV Tank Inspections

### Introduction

All storage vessels/ tanks require an annual inspection to conform to HSE regulations. ACoP L8 states that the internal condition of tanks should be assessed on an annual basis.

The offshore environment can make inspecting tanks extremely hard. OWM have developed a unique method of inspecting tanks using an ROV.

This inspection methods allows for the tank to stay online during the inspection as well as mitigating against any confined space entry. Ultimately decreasing any down time and allowing for easier inspections to occur.

**Still shots taken from video footage of a potable water tank inspection**

**If you would like more information please contact OWM**
